You can shoot when the barrels of a tank are sticking into something you will just get more recoil of off buildings. But you can hit the stealth even if the turret goes into it, and the stealth can hit you. If your in a mammy push back you will at least to splash damage if you miss. Oh yeah, all those n00bs out there who like to shoot at vehicles with FLying vehicle's rockets, stop! You will do more damage faster and more accurate if u use the gun. the Rockets are only really good against structures.
