Double APC rushes ...There are many variants of using this tactic.Leadng with one tank to one side while the onslaught goes the other...One beacon/nuke out in plain view with other hidden both designated for same target ...Drawing enemy fire and attention to one side with a flame tank while a couple of stealths sneak on other side...Gathering intel on hourglass before rushing with flame tanks (Any mammals parked in front of AGT)... I love to coordinate these kind of tactics ... unfortunately they require teamwork. Which is hard to come by on G-Spy. Not impossible but hard none the less. Maybe G-Spy is my problem. Who knows !Anyone else have any good ones? I would not be surprised if no one shared. My point in this post was to bring teamwork more into the light.GameSpy-> Shadow
