i found out a really cool way to drive the harvy. but the problem is it uses alot of fuel, so bring an extra can. so, heres how you do it: first, take all the fuel, and pour it in that little slot on the front of your computer. then, you gotta start the sucker up, so turn on your computer. if it doesnt start, then "help it out" a little and toss a match in. wait a few minutes, and you ought to be ready to drive.
