[April 19, 2002: Message edited by: MNeMoNiCS] Laying mines is pretty much the best way and really the only reliable way. Usually the only other way is to assault the Nod base as soon as possible. In maps without defenses, tank assaults are very deadly especially if you throw in an APC or two full of engineers at the same time. Just don't forget to have enough people back at base to defend it.
