You can as a Tech or Hotwire place Proxy C4 on Team Mates or vehicles and it will kill Enemys. (Only do this if Friendly fire is off) You will get some funny reactions from people when you do this but it does work. Placing it on team members it's great if they are in close combat. I like to use a few proxies on the bumpers of my vehicles too. This helps get the ones who are too fast to squish and the ones who hide behind a rock or wall. People don't realize what hit them. I even get a few luck kills by placing timed c4 on freindlys that are going in to the enemy base or tunnels. When or if they get killed it just drops on the ground and goes off anyway.
