I'm making a tiberium sponge. It looks really good but I don't know what texture to use for the tiberium crystals. Could someone give me the name of this texture in the texture package. P.S. I was looking through always.dat and found the skin to the tiberium sponge. That must mean there is already a tiberium sponge in renegade made by westwood. Edit: I don't need the sponge model. I already extracted it from C&C_Basin. I just wanted to look how ack made it. I made my own model that is much better but I don't know what texture to use for the crystals.
