I'm not a modder or anything, I tried once messing with the stuff but just didn't get it, but. I know most of you have played Goldeneye on the N64. I think those were some of the most fun deathmatch maps I've ever played in a game, maybe just because it was the first of that kind that I ever really played. I just think it would be one of the greatest mods/maps yet if someone redid some of the better ones for renegade. Doesn't anyone else agree these were some great maps?
