hahaha lol very funny...i bet your new huh??? well you need to have Photoshop or paint pro installed. then you need the DXT tools. its a plugin. i forgot where to get it tho. then you need XCC Mixer. i forgot its URL aswell. then use XCC Mixer, open a file called always.dat then find the dds file you wanna skin. then just mess around with PP or PSand then save. and then just move that file into your renegade/data folder.i hope that helps.
