I can merge the wavs together now, but they "click" as they switch between each one in the output file... kinda like a skipping record. I might try 'truncating' a few bytes off the end of each wav to see if that stops my clicking...And if the CD might be dodgy, try copying the cd to your HD first, then installing it, it been quite some strange Microsoft thing for sometime, their programs couldnt care less where they are installed from. (Probably for NET support)(P.S. I'm UK )
