Dont you think 3000 polys is a bit high?You couldnt skin the original vesion too, i suppose?Other things i thought didnt make it seem to fit (again: No offense, it looks very good): It looks more like a guard tower with some antennas on top than a com tower now. It alsolooks very thin/hollow with that hole/door in the top section.) It just imagined something a bit more simple, and low poly But the skin is perfect (except the one dish)No offense, i can ofcourse try to do it myself if you wont
