Hi...I had planed to make a Server Live Script.Like there are for other Games such as UT or Q3.I just want to get all server vars (name, current map, max players, players ingame, etc...) and all player stats (frags, score, etc...) to display them on a website refreshing every 30 seconds... I think that would be a realy cool addition to my Site www.renegade-planet.de but i send a Mail to Dev a few Weeks ago and he asked the main Networking Guy and he told me that its impossible...Will it be possible with your method?
