I'm learning this fine.. very simple for me.. I've done other things in the past.. The problem is it doesn't tell where things are located (i.e. physics files) and it crashes to god damn much.. I'd have a gunboat, recon bike, apache/orca bomber, and a-10 by now, with rebalancing on the other units (since airpatch is very unbalanced) by now if this thing didn't crash.
