I would give you some space (www.aspenth.com), but sadly, my server does not allow PHP scripts, only CGI.
EDIT: Forgot to mention that I couldn't give you FTP access either because I can't set restrictions on guest accounts. Therefore, you'd have admin privileges, being able to delete, rename, or move files.

Oh, and Blazer. The flame text wasn't a plugin or filter, it's completely synthetic. Sorry if I was "barging" in on your question, but when the topic changed slightly into Photoshop and graphic design, I just couldn't resist.
