Could you add to the img tag, the width= attribute, the height= attribut.

This would do away with the "I can't resize it, it's not my fault it's too big etc.etc.etc.'

If the image is too big for the posting area than the poster can add the width= attribute and have it scale to a width of 600-700, however wide the post area is...

if the user wants, he could put the image tag inside of a url tag and create a thumbnail by adding the width/height tags and making them 100x100 (for example)
