well anyway, here is how it is done via FDSTalk

(i am not on my normal PC at the moment, so i cant get some arguments when you call the function)

Init

Send_Message remotepass, IP (useing Long2IP, (google)), local port

Send_Message message to send to FDS, IP (useing Long2IP, (google)), local port

Send_Message Bye, IP (useing Long2IP, (google)), local port

Service

Get_Response variablename (dont do this if you use VB6)

Service

Shutdown

if you skip out service, it will make the server lag
