All elevators lag. I is proven and you get rubber band whiped back to the top ect alot but...

AircraftkillerThat's because the default elevators are poorly designed. The ones used in Renegade Alert, which I made and animated myself, work fine online. There have been about six reports of problems with them, out of thousands of players.

If yours are so much better why dont you tell everyone how? O wait its another one of the Ren Alert only features isnt it?
