
Subject: Arming a beacon with a Stealth Black Hand doesn't expose him

I also found this out for myself yesterday. On field (AGT was down), a SBH tried to place a beacon behind our bar. I saw him running there, but just let him deploy for the points. When I got behind the bar, I saw the beacon, being placed, but I didn't immediatly see the SBH.

Untill yesterday I always thought SBH's uncloack when placing a beacon (kind of sad playing this game from the beginning but just now discovering this).
