I don't know if this will effect RG, BR .net or other Renegade products and such, but it is something I felt you need to know and prepare for.

SP2 looks like it is going to be a bitch. Even Symantec is working hard to get their virus software to play nice with SP2. Microsoft calls it a "Comprehensive security overhaul of Windows XP"

MicrosoftPerhaps the biggest change will be a host of new alerts that offer more detailed information about what programs are trying to contact the computer and give the user more chances to accept or decline.

So get prepaired and plan for the worst.
