Yeah, it definatly depends on your cooling, I've overclocked my athlon XP 2600+ a whole 200mhz with little temperature changes. Mainly because I have 4 fans on the back of the tower, 2 on the front, and 1 on the side, and my room's temperate is always >70 degrees cause I'm confortable in a cool enviroment . But to pay back, the computer is loud as hell.
