Madtonel think you guys (SK i guess) should make woldata.key generator for the people who don't have ren installed but have a valid cd key.

Like for example if you don't have one you just run the generator, put in your cd key and then it encrypts it and makes the file.

See my situation is i lost my install cd but still have my game cd and cd key (have photos to prove) and its a pain because the only way currently i know of to get a woldata.key is to install ren.

Is it possible for SK to work out some kind of encryption method?
yeah, I agree... that would be good in my opinion
