LOL! So there was no point of me uplaodign that for the people who don't want to install Renegade all over again. Ohh well. I don't care that the link to the download is on my site, but I'm goign to have to have him remove it, I am removing the RenAlert .993 patch from my server untill I get a better server, my current one sucks balls. Ohh well, my dad said he would let me get one off of server matrix if I do a couple things . . . Something in my signature has to do with it . . .
