---

Open up command prompt Startmenu > run : cmd [enter]  
In the command console type:

```
netstat -an
```

This will show all of your network connections etc. See if you find anything suspicious. If there are alot of entries here it is mostlikely that you have a virus.

Get a free virus software package at [www.Free-AV.com](http://www.Free-AV.com).

Also check with cltr+alt+del what programs are running in background.  
Terminate the ones you are sure of that dont need to be there.
