icedog90I'm barely convinced that "wall hack" even exists. It's mostly just something made up by n00bs who would get killed behind a rock because of lag, but are too stupid to figure that out and call it "wall hack."

Even if "wall hack" exists, I highly doubt you can modify it to work for only one weapon.

Actually, on my old laptop sometimes I could see through certain walls and objects in the map. I could even shoot through them too. I obviously wasn't cheating, it was just a glitch with the graphics card. I got new drivers and it fixed it. So there definitely is "wall hack."
