icedog90smwScottActually, on my old laptop sometimes I could see through certain walls and objects in the map. I could even shoot through them too. I obviously wasn't cheating, it was just a glitch with the graphics card. I got new drivers and it fixed it. So there definitely is "wall hack."

Yes, but it's not a hack, it's a glitch. So instead of it being "wall hack," it would be considered "wall glitch."

My point was that if it already exists in the game as a glitch, it probably wouldn't be very difficult to reproduce the glitch in the form of a cheat. If someone talks about a wall hack I definitely wouldn't rule them out completely.
