BHS won't do anything to me, first of all, since I don't represent BHS and neither does anyone but the "central leadership" consisting of Crimson, Blazer, and mac. They are the only ones who truly represent BHS as a whole, and if they were cheating I could see your point.

There's a pretty big difference between spouses finding another man to have sex with, and just trying to get back at someone for saying shit to you online. As you well know, a lot of adultery\cheating-on-people has to do with lust, desire for something normally unattainable, etc... It has little to do with trying to piss someone off, that shit normally happens in soap operas. The Internet is a perplexing situation, people can say whatever they want with little fear of retaliation. Some asshole punk can say anything he wants to me, and try to get away with it... If he were here in public, I'd bash his face in. Since I couldn't do that to BC, especially Scrumfy, I chose to do what I could and cheat in their servers. I assure you that the cheating was not done because I'm incompetent at the game. You can check my records at the pits and see I keep a consistent K/D ratio of 5.0+, normally 6.0 to 8.0 out of hundreds of games, scoring over 3,000 kills averaged per month... All with RenGuard on. I don't need to cheat to play well.

So yes, I did go somewhere else. They just didn't do the same, felt it necessary to bash myself, Crimson, Blazer, mac, AND RenGuard... So I did what I felt was necessary to give them a kick in the balls. I remember them saying "no one can cheat in our servers," yet there I was, fucking up the Nod terminals with my GDI rifle soldier...

How can you not trust me? I came right out and told you exactly what I did. If I said "I don't cheat" and then proceeded to cheat like a motherfucker I could very well understand why you wouldn't trust me, but hey... To each their own.
