Here is it:

Commands are:

!warn [player] [reason]
!delwarns [player]
!ignore [player]
!delignore [player]
!ignorestat [player]
!lgregulation on|off
!warnings on|off

Added lgregulation module and warnings module to the Brenbot modules list .

Installation:
1.) Put this files into your mirc directory:
    warn.mrc
    members.txt
    keywords.txt

2.) Edit the settings in warn.mrc
3.) Run mirc and join the channel with the serverbot in it.
Be sure you have voice (minimum) .
Type "/load -rs script.ini" into your mirc.

Now the script should work.

All commands are available in irc, in F2-chat, in F3-chat and via paging
except the !lgregulation and the !warnings commands (irc only)

1 warning --> Warning from the host
2 warnings --> qkick
3 warnings --> kick
4 warnings --> kickban
