So your saying that non Renguard servers are not better in what way and servers not running Renguard are.?

The mods can make allot of mistake on acusing players saying they cheat with out any prrof but an anti cheat program won't let you cheat. The mods can never test for cheats only anti cheat program can do that even the log file ain't good enough becuase if your not log on the network you won't have an r next to your name thats on server not running Renguard even if you have Renguard becuase your not on the network for Renguard but in a Renguard servers it will tell you that you not running it go download it.then it boots you.Two things can cuase this not running Renguard or you have Rengurad but the program is not log on the network. I would know this is how i got tempry banned from a server not running Renguard.The server in question is [DS] black-Cell.net mamamoth server 32 player max but was still able to join the Renguard protected server.Right befoire the ban i got private messege from a player saying that he wanted to test me. When i join the server there was no mod there i used this command to make sure !mods no mod in game.When i tried to eplian it to them they perm banned me. Now i can even join their [DS] rengurad server ether -_-. I always get acuse in servers not running Renguard and acusers spam private messege with no end so this mod was not log in as a mod at the time so was another person who just didn't like getting owen by skilled play and decide to spam. this is on a 32 max server how in hell you sapose to read all that . I ignore private messeges.

I for one don't like servers that don't run Renguard . I still see cheaters play on those type of servers and they ruin good servers.

Clean Poeple do get banned of them serves or kicked becuase the mods think they cheat and don't really have prrof. That not really there fault humans can't tell if someone is cheating only anti cheat programs can.

these are the cons for running server with out Renguard.

Freedom to acuse poeple that they are cheatting.
Freedom for cheaters to play with out gettting kicked or booted.
Freedom for mods to boot players at will for no reason other than getting owned and not liking it.

Renguard server cons please fill in the blank i see no cons what so ever.
I just homor you
Can't cheat no more
Getting owned by reall skilled players
Mods can't kick pople they don't like now becuase Renguard is their to prove they don't cheat. wooties.

What happen to me will also heppen to you. I know for a fact you play on renguard becuase you as me don't like cheaters and explioters those are the no skill players.

I never had any problems with Renguard servers just the one not running it.
Server not running Renguard failed when it come for checking for cheats and hacks and bigheads.

Here a screenshot if you don't beleive me. This all came from a server not running Renguard. Just becuase i said i will never play on a server that don't run Renguard. They made sure i don't play on their [DS] Renguard prtoected server ether
