Hi there I was just playing on the Fanmaps (i think)Crazy CTF Vehicles server and they did not have Renguard running but it seems they had a bot that would identify players who were connected to the renguard server. I would like to know if this is a public release or something that they would like to keep secret. I run a small clan server and not everyone likes to run renguard. I however would like to be able to verify that I do not cheat cause once you reach a certain level of ability, no can possibly believe that one does not cheat. Anyways anyone who knows anything about this could you let me in on this. P.S. thank you to all of you who provide support in these forums for us not in the know server admins. Your tutorials and advice have helped me out tons, Thanx [GEE]Jkuby <http://www.gee-clan.com>
