so your accusing me of cheating? ok, let me put it this way. I just started playing renegade last week again, after the break i took in the game. I play for a week, no errors, but im playing with out rengaurd, then i go into a server that requires it, so i go, ok, anticheat, ill get it, after playing for about 15-20 minutes, windows locks up. Cant move in the game, cant close the game, cant do anythingm forced to turn off the computer manually. This happens each time i play, on those systems. What do they all have in common? Rengaurd.

Now, if your going to release a anti-cheat program that over 3/4 of the renegade servers will use, you need to learn to accept that your product is not perfect.

just my two cents, but this guy came with a problem, and all you guys did was make fun of him.

 you cant show logs if it locks up the system, and you have to turn off your computer, if there is a .txt in a folder some were that displays the whole log of rengaurd events, please post were that would be.

Thanks! [/edit]
