---

I have this program called DVD X Copy. I copied the movie Kill Bill Vol2 a few moments ago, everything went fine. I popped the movie in my DVD player and the menu on the DVD loaded up real nice, but when I hit play it would skip through the chapters on the disc. It only has about 2 seconds on each chapter, then it goes to the next chapter. I was wondering before I wasted another DVD-R if I didn't compress the movie enough? The compression I saw was at 42% I believe. I also was wondering if it didn't play correctly because it has some sort of code that blocks it from being played?

I'd greatly appreciate any help you can give me.
