---

Well It works today with no problems, must of tried like 50 times yesterday and today connected with no problems.

Quote:I was playing renegade with no problems then I went to change my SN and all of the sudden I get "Requesting server list..." after 30 secs I get "Operation timed out". Never ever had this problem b4 (well maybe when WOL was down I had it.)

Things I tried:

Reinstalling renegade

Removing renegade completely then reinstalling (even ver 1.002 gets the time out error)

Dissabling Antivirus Scanner

Dissabling Firewall

Uninstalling Firewall

XP firewall is dissabled

Restarting computer/renegade

Deleting hosts file

Cable Modem, no hub/router

Win XP SP1

PLZ help me

I'm also going to try reseting my IP maybe wol banned the IP i have...
