We'll i'm having a problem and havent been able to figure out how to fix it....i am on renguard and brenbot doesnt say i am
for example

<@DrkMsg1> Host: DrkAgnt is NOT running RenGuard! DrkAgnt COULD be cheating.
<@DrkMsg1> DrkAgnt: !rglocate DrkAgnt public
<@T1000> !msg [DrkLocator]: DrkAgnt is c0nnected to RenGuard and idle.

I enabled the half-renguard option, but of course brenbot doesnt think i'm on rg so i cant use commands....

i tried disabling renguard in the modules and get this message

<@DrkAgnt> !set renguard off
<@DrkMsg1> This module is obsolete. If you do not want to kick non-rg players, turn on half-RenGuard mode. See documentation for details.

Can someone please help me with this problem
also i edited the brenbot.dat, and it doesnt show that the renguard module is locked so i dont believe that is the problem.

Thank You for your time
-DrkAgnt
