Naamlooslf W3D was a beter engine, i'm sure WW would have made em more like in Lance3066 pic's.

But it isn't...

That is not because of the engine. For some ridicilous reason somebody at the design team decided the Humvee should look like that. The original Renegade Humvee looked much better, even though it wasn't based off the correct variant, M1026.

THIS is a real Humvee:

The Renegade recon bike is totally fictious. Tiberian Dawn's bike design was based off Kaneda's bike from the Akira anime.
