flyingfoxA game engine is not an engine, like you pointed out there's a huge difference. Plus 'game engine' is a generalised name for code in which you write more code to work on it.....so i'm still right.

engine - machinery.

game engine - code.

Ok, now your being pedantic! Surely in a topic like this i wouldn't go off an talk about a car engine.

An please refrain from correcting me, if i need an english lesson i'll be sure to contact you.
