Dante left hand bone position is a bit off, if you were to fire an AK-47, and hold it there, you would get severe burns from ejecting cartridges... put the hand on the wood stock where it goes,

pistol looks good, did you add the clip as well?

Well the thing is he is running. So the hand moves. Not like anyone will really notice when in game playing.

And i kept the original reload animation for both pistols. It looks good why not?
