I apologise ruddles, The sites were in actuality, <http://www.reneguard.com>, and <http://www.reneguard.net>

Sorry for creatinig the confusion, but the same issue applies, these guys are using a name that is very close to Renguard. And, they do send you spyware big time, I just spent about four hours de-buggin my sys and its still not right..sigh..no one was acissing renguard of anything underhanded. You might take these posts a little more seriously instead of just reacting.

Sorry I bothered you.

by_ruddlesWhats that smell? Oh thats right, bullsh*t.

Renguard installs no spyware, no viruses, and doesn't go round your house killing all your pets after you've installed it either.

Next.
