flyingfoxIt really pays to have windows ME..

it sure isn't a service pack problem, because windows ME does not get service packs and suffers the same crashing. run the game at your desktop resolution, like most game developers recommend in their release notes.

id bet on the res causing the crash..

i run at 1600 by 1200.. and switchin back from w/e i have ren set it would cause it..

ATI 9600 pro (i miss the cool Nvidia desktop features!)
