What really bothers me is the fact that so many people have problems with SP2, some are really severe, but I have zero problems with it. Although, my Renegade does crash on exit sometimes, but I doubt that's an SP2 issue.

JPYeh, its sp2

Other crashes are caused by just Renegade btw.

If u want reduce the chance of Renegade crashing
play on 640x400 16 bit.

What a lame excuse to fix a simple problem. Only people who are stuck in the dark ages of graphics can bear looking at something as bad as that.
