I spoke to v00d00.

We're not sure how to do this - what kind of proxy is this? A http proxy? A Nat proxy?

Normally, to play renegade you need direct net (tcp/ip) access to play renegade. That is why we are a bit confused what you exactly mean. If you can tell us what exact kind of configuration you have, and give us some details how to reproduce that configuration maybe we can work something out..
