I get this every once in a while too. I could be logged in playing all day, accidentally hit the back button and have to log back in and I get the same thing. I also get this trying for the 1st time too. What has worked for me is I just keep trying to log in over and over and finally I get in correctly.

I don't think it has anything to do with RG if anyone thinks that because I have turned it off and it still happened. I also suspect it may be partly internet issues, but that is a big guess. Hearing it happens to someone else, makes me think it is something with the connection part to WOL. Do you have a router?
