When I load renguard It says "starting core-patch pre-install check" then after finishing the check it just says there are errors and disconnects from renguard.

It doesn't specify what errors there are.

I don't have any skins or anything and I havn't modified anything.

Because I formatted my comp, I re-installed renegade, then the 1.037 patch then renguard and loaded renguard so it would install CP1 but I get the message above :s
