need any help creating a website I bet I can..

I code in ASP though, and I have noticed that most clans use linux servers. (Which is php only, my php ain't as good as my asp....)

Guess linux servers are just cheaper than windows....

And if ya wanna know what I can do try http://www.soopskins.org I own and run that site...as well as others..

10x better forum than these php forums, and 100% more secure. Heck are even working on migrating ppl over to it from phpbb forums.
