liberatorxC4pRoXVerizon sucks. They said my new connection (3mbps/768kbps) would be activated yesterday at 6 pm. So what did I do? I installed my new pwnage modem today. The speed hasn't changed at all. It's still 380 kbps...OMFG!

grabs the shotty

Dude, that is 3 megabit. I'm on an uncapped Charter cable who's max rated is 3megabit, i top out at around that depending on the server. And that is a whole hell of a lot faster than this damn 56k modem at my folks. So don't whine.

It should be way faster, I'm getting tired of downloading at 50 kb/sec.
