Well things we going great and I was in a time without the need for help. Now I have hit this period of constant trouble with the bot staying up. It keeps crashing.

I have this bit of log before it crashes, not sure if it helps. I will also try to get more IRC log. Also when it crashes the CPU usage goes up to %50 or more, normally the server CPU sits at 15%-25%. The bot will crash server side but it takes some time before the bot leaves IRC via a ping timeout.
