
Subject: Yet another install problem

I've browsed every install post I could find, and still havent come across this one yet:

Running with Win2k, 312m Ram, PIII 800 and a Hercules 32meg Vidcard. Updated drivers on everything. I get through the install intro, serial number and get a crash at 13% install EVERY TIME. I've tried the alternate install with the alternate serial number on a different machine - same thing.

I get a crash to desktop - no error message, no blue screen, nothing in Task Manager or processes - just a desktop...

I understand this is now a bargain bin game, but I'd still like to get my 10 bucks worth out of it...ANYONE else had this issue and fixed it???

Thanks,
TAY
