Yes. Find out which ports the Renegade FDS needs and forward them to your computer.

Your router will have a configuration page that you can access by typing in 192.168.1.1 in your web browser. The IP will not be the same for all routers. That is the IP for Linksys routers.

Anyway, go to the configuration page, find the port forwarding section and forward them to your internal IP.

To find ou your internal IP, click Start>Run>Type "cmd">Enter>Type "ipconfig:> Enter.

Look at the IP adress there and that is your internal IP. Forward any ports you need for the FDS to that port.

Visit the website of the company that makes your router. They will have manuals up there.
