XeonTeamlol, rengay is already hacked, if u wanna call it that.

I just put the w3d files into the mix files... lol

Takes rentard ages to find them get a few games in, then start over again.

Its a shame UC is down. Had some new files to upload...

I dont think u know mt telephone number or street address, so...

I have been using HIEW, and a few other tools to hex edit rengaurd, and up until now, i have been able to stop it from scanning DDS files, and have stopped it from auto updateing. But in time w3d files and MIX files will not be scanned.

You sir, are an idiot. None of the methods you mention work
1. RenGuard detects altered mix files
2. RenGuard detects any changes to the EXE

So you see, my bragging hacker wannabe, you are full of crap. You have not bypassed RenGuard in any way, shape, or form. Now go back to using Final Ren on some un-RG protected server and thinking you are leet. :twisted:
