Right, however a mid air explosion of a nuclear missile does not rain down fall out as I've said like 15 times. You would have a giant "engine block" of a war head falling from the sky and digging itself like 30 feet into the ground. It's a really heavy chunk of metal. That's it. Just because there's an explosion doesn't mean it'll do Didly to the warhead. They're designed to withstand mad crazy duress for exactly this reason.
