---

i have a Gigabyte x800XT Platinum.

It will play every game I own on maximum resolution with everything set to max full or extra. it also managed Doom3 plus the ultra-high-quality mod with no problem at all.

As I understand it the 6800 ultras kick ass equally well and all your post is likely to do is start an argument!

rest assured if you are spending that much on a GFX card itll do the job.

2 notes:

[1] dont expect a massive FPS rise in Renegade. You need a faster CPU as well for that as Ren is largely CPU dependant.

[2] it may well be worth waiting a little while the x850 and 900s will be appearing soon, not to mention SLi.
