Dell Dimension 3000
Intel Pentium 4 Processor (2.80GHz, 1MB L2 Cache, 533MHz FSB)
256MB Shared* DDR SDRAM
40GB Hard Drive
98MB Integrated Intel Extreme Graphics 2
48x CD-RW
Integrated Audio
256k DSL (Qwest msn, wireless) Getting rid of wireless and going wired.

Ok, I posted this because I need some help. My computer can only have PCI graphics cards. Dell does not sell them so I have to get what you would call a third-party graphics card. Any suggestions?

I am upgrading my ram to 512MB Shared* DDR SDRAM

Also, for all you who are 18 or older, I am only 15 years old, bought this computer myself, have hardly any money, and need money. So I need a good graphics card at a low price. And truly, Renegade and Zero:Hour are the only games I play on my computer.

Money spent on PC: \$600

And this following quote is directly to kfc who posts alot of trash-talk in the forums. "We don't care if you are from LANManiacs, or if you have all the money in the world to build your PERFECT GAMING PC, so stop mawking and dogging all our pc's.

I need help finding a graphics card that is a PCI card. And that would run C&C Generals Zero:Hour like a dream. Renegade works fine.

Thank you all for reading this post. I appreciate it. And I would like to hear "EVERYONES" suggestions if you can post please. Thank you.
